

AGREEMENT OF THE NATIONAL ENERGY COMMISSION ESTABLISHING THE REQUIREMENTS TO OBTAIN THE GENERATION PERMIT FOR INTERCONNECTED SELF-CONSUMPTION IN POWER PLANTS WHOSE CAPACITY IS BETWEEN 0.7 AND 20 MEGAWATTS.

JULY 2025

Executive Summary:

- On July 10, 2025, the Agreement of the National Energy Commission ("CNE") was published in the Preliminary Projects Portal of the National Commission for Regulatory Improvement ('**CONAMER**') establishing the requirements to obtain the generation permit for interconnected self-consumption in power plants with a capacity between 0.7 and 20 Megawatts ("**The Agreement**").
- It is relevant to have the requirements in order to be able to implement the application process for the electric power generation permit for self-consumption power plants interconnected to the National Electric System with a capacity between 0.7 and 20 MW in a simplified way and thus comply with the provisions of Article 30 of the Electric Sector Law ("**LSE**").
- It is relevant to highlight that having the regulatory requirements to submit the request for the corresponding permit is the deadline for the authority to respond, which provides certainty to have a permit, which translates into an advantage for the attraction of investments and a possible enhancer of projects of this type.

CONTENT:

Articles 30 and 33 of the Electricity Sector Law recognize as self-consumption the production of a Power Plant with a capacity equal to or greater than 0.7 MW that is destined to satisfy the needs of the holder of the generation permit in force, providing that interconnected self-consumption in power plants whose capacity is between 0.7 and 20 MW may be subject to a simplified procedure to obtain the generation permit, according to the guidelines issued for such purpose by this CNE.

In this sense, CONAMER publishes the Preliminary Draft of the Agreement, the purpose of which is to disclose the requirements to be complied with by those interested in obtaining a permit for interconnected self-consumption in power plants with a capacity between 0.7 and 20 MW. Among the requirements is a single electronic format with technical-financial annexes; the simplified works program; the corresponding business plan in case the power plant is not installed; a diagram of the

applicant's shareholding and corporate structure, including the percentages of participation in the capital stock and the identification of the individuals or legal entities that exercise direct or indirect control of the company.

The Agreement establishes that the CNE must analyze, evaluate and approve the request through the procedure provided for this purpose in the Regulations of the LSE and in the Administrative Provisions issued for this purpose, which makes it necessary to be very attentive to the publication of these instruments, which will allow a greater deployment of self-consumption projects and lay the foundations for the electricity sector to gain strength based on a reliable and certain environment.
